SUMMARY

Frontend engineer with 5+ years building large-scale web and mobile applications in Angular, React, and TypeScript. Code owner for core areas of an enterprise platform, focused on performance, accessibility, and reusable component architecture. Uses AI coding assistants and spec-driven development to ship features faster without sacrificing quality, while setting coding standards and mentoring developers.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, SCSS

Frameworks & Libraries: Angular, React, Next.js, RxJS, Redux Toolkit, React Native, Tailwind CSS, PrimeNG, Express

Testing: Jasmine, Jest

Tools: Node.js, npm, Git, GitHub, Bitbucket, Postman, Jira, Amplitude

Practices: Web Accessibility (WCAG), Performance Optimization, Component Libraries / Design Systems, CI/CD, AI-Assisted Development, Spec-Driven Development

EXPERIENCE

Software Engineer II – Frontend | Advisor360 | April 2022 – Present

- Lead frontend development of Angular/TypeScript modules for an enterprise wealth-management platform serving 30,000+ financial advisors, driving architecture decisions around performance, accessibility (WCAG), and modular design.
- Authored design documents for new features, working with backend engineers and UX designers to define scope, feasibility, and delivery estimates.
- Adopted spec-driven development with AI coding assistants, turning detailed specs into implementation plans, generated code, and unit tests, then reviewing output against team standards to ship features faster.
- Code owner for core application areas: established frontend coding standards, reviewed pull requests, and mentored junior developers.
- Spearheaded refactoring of legacy UI into a shared component library adopted across multiple teams, improving UI consistency and reducing duplicate code.
- Partnered with QA on test strategy, writing unit tests (Jasmine/Jest) to improve coverage and release confidence.
- Cut build times and reduced rendering overhead by migrating key components to OnPush change detection and lazy-loading feature modules.

Junior Software Developer | Trout House Tech | August 2021 – March 2022

- Built reusable React and React Native component sets shared across multiple client projects, speeding up delivery of new apps.
- Implemented key features like Authentication (Google, Apple), state management with Redux Toolkit, and database management with Firebase.
- Translated Figma designs into responsive, production-ready UIs.

EDUCATION

Bachelor's Degree | Framingham State University | Framingham, MA | 2018

General Assembly | Software Engineering Immersive | Certificate | 2020–2021
